AELITEFLO™
Light-Cured Flowable Microhybrid Composite

VERSATILE
AELITEFLO is a light-cured composite with flow characteristics which make it ideal for Class V restorations, as well as Class III’s and small Class IV’s. Other uses of this material are as a liner for Class I and II restorations, pit and fissure sealants, the repair of marginal defects, small core build-ups, blocking out undercuts, porcelain repair, porcelain veneer cementation or as a flowable composite for bonding fibrous splints into place.

FLEXIBLE
AELITEFLO was specially developed with a patented long chain monomer which supplements the conventional Bis-GMA resin to provide a more elastic composite. This allows restorations to flex with the tooth for improved marginal integrity and overall restoration longevity.

UNIQUE BENEFITS

• Low modulus of elasticity microscopically bends with the natural flexure of the tooth to prevent de-bonding and marginal breakdown, especially in Class V restorations

• Flowable composite can be easily dispensed and injected into the preparation without dripping and slumping

• Uniform particle size is easily polished and stain resistant

• Glass-filler provides excellent wear resistance and strength

CLINICAL SIGNIFICANCE

• Due to its elastic properties, AELITEFLO “bends with the tooth”, leading to better retention. Excellent for abfraction lesions and Class V defects.
