TheraCal LC is a light-cured, resin-modified calcium silicate liner designed for use in direct and indirect pulp capping, as a protective liner under composites, amalgams, cements, and other base materials. It can be used as a replacement for calcium hydroxide, glass ionomer, RMGI, IRM/ZOE and other restorative materials. TheraCal LC performs as an insulator/barrier and protectant of the dental pulpal complex.

TheraCal LC’s syringe delivery offers controlled and precise placement in all deep cavity preparations. TheraCal LC is easy to manipulate without running or slumping and its light-cured ability permits immediate placement of a definitive restorative material.

**Liquid Apatite at Your Fingertips**

- **Protective liner:** TheraCal LC can be used as a protective liner under restorative materials, cements or other base materials.

- **Pulp capping agent:** TheraCal LC may be placed directly on pulpal exposures after hemostasis is obtained. It is indicated for any pulpal exposures, including carious exposures, mechanical exposures or exposures due to trauma.

TheraCal LC is a light-cured, resin-modified calcium silicate pulp protectant/liner designed for use in direct and indirect pulp capping, as a protective liner under composites, amalgams, cements, and other base materials. It can be used as a replacement for calcium hydroxide, glass ionomer, RMGI, IRM/ZOE and other restorative materials. TheraCal LC performs as an insulator/barrier and protectant of the dental pulpal complex.

TheraCal LC’s syringe delivery offers controlled and precise placement in all deep cavity preparations. TheraCal LC is easy to manipulate without running or slumping and its light-cured ability permits immediate placement of a definitive restorative material.
CALCIUM RELEASE
RADIOPAQUE
ALKALINE pH
PULP PROTECTANT

UNIQUE HYDROPHILIC MATRIX

The proprietary formulation of TheraCal LC consists of tri-calcium silicate particles in a hydrophilic monomer that provides significant calcium release* making it uniquely stable and durable as a liner or pulp capping material.

Thera Benefits

- **Calcium release** stimulates hydroxyapatite and secondary dentin bridge formation²,³
- Significant **calcium release** leads to protective seal⁵,⁷,⁸
- The **alkaline pH** promotes healing, pulp vitality and apatite formation²,⁴
- Forms a **protective barrier** that insulates the pulp⁵,⁶, resulting in virtually no post-operative sensitivity
- **Moisture tolerant** and radiopaque - it will not dissolve over time and it will be visible on an radiograph

* BISCO has, on file, the calcium release data for TheraCal LC.

Indirect Pulp Capping Placement  
Dentistry courtesy of Dr. Juan Angel Castro

1. Isolate tooth.
2. Remove infected carious tooth structure. Leave preparation visibly moist.
3. Apply TheraCal LC directly to visibly moist dentin. Layer is not to exceed 1 mm in depth. Manipulate into a smooth surface. Light-cure for 20 seconds.
4. Continue tooth restoration.

Direct Pulp Capping Placement  
Dentistry courtesy of Dr. Elvio Durando

1. Isolate tooth.
3. Apply TheraCal LC directly to exposed pulp. Layer is not to exceed 1 mm in depth. Cover all the exposed areas and extend TheraCal LC at least 1 mm onto sound dentin surrounding the exposure. Light-cure for 20 seconds.
4. Apply adhesive. (All-Bond Universal with selective-etch technique shown)
5. Continue tooth restoration.

TheraCal LC Quick Tips
- Apply to visibly moist dentin.
- Apply in <1 mm increments.
- Light cure for 20 seconds.
